DESCRIPTION:

Tebentafusp-tebn is a bispecific T-cell engager; it consists of a soluble HLA-A*02:01-restricted T-cell receptor that is specific for the glycoprotein 100 (gp100) peptide and is fused to an anti-CD3 single-chain variable fragment. The T-cell receptor binds to a gp100 peptide presented by HLA-A*02:01 on the surface of uveal melanoma tumor cells. Once bound, they recruit and activate polyclonal T-cells (through CD3) to release inflammatory cytokines and cytolytic proteins, resulting in direct lysis of uveal melanoma tumor cells.
